Initial = 10,000 kWh/yr
Anticipated = 1,000,000 kWh/yr

What BPE Provided ...

NETA needed a few key bits of information and guidance to ensure they got their grow facility off the ground and profitable as soon as possible: Capacity Tag M., Demand Side Mgt., and a solid long-term Procurement Strategy.

We leveraged our knowledge of the industry and worked with NETA to identify and implement a plan that accommodated their short term needs as well as their long term plans for expansion, resulting in, over the course of their 5-year plan,

\$250 k in cost avoidance!

Allow us the opportunity to do the same for your established or start-up marijuana growing and dispensing facilities. Ask around about us. Contact us for an initial consult. *~ the BPE Team*

What NETA Needed ...

Growth/Expansion focused energy usage and procurement strategy.

How did we do it? A transparent, tailored, phase-driven approach ...

Grow with us.

Together. Powerful.
