GaiaWater.com

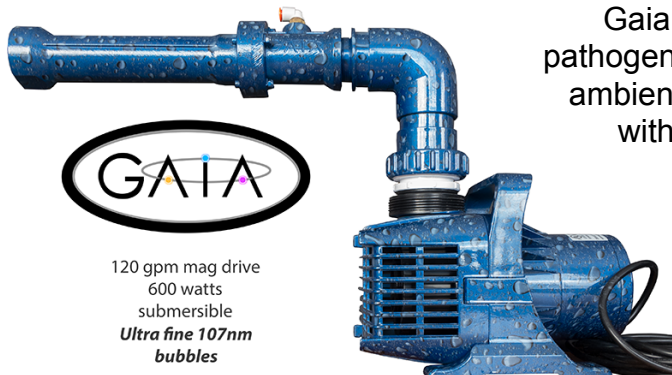

Recently I was introduced to **Gaia** technology through an ACMPR client. Their harvest biomass increased 50% and trimmed flower 20% more mass. I realized this was extra profit as the lights and lease are already paid at a commercial grow.

Today I am here to speak at the O'Cannabiz Expo to help promote Cannabis and Healthcare solutions including technology solutions like GAIA water systems which I am a licensed distributor.

Gaia technology can turn your chemical fertilizer into living biological compost tea. The aerobic bacteria convert fertilizer into plant sugars, enabling plants to use energy for growth rather than food conversion. The nano size ultra-fine bubbles keep water oxygenated for days, nutrients never turn bad. Oxygen is constantly surrounding the rhizome in hydro or soil applications.

It is so important to keep your microbes alive and well.

Gaia nano o2 systems increase plant yield, kill off pathogens in legacy irrigations systems, allows for higher ambient heat in rooms (hydro savings), 100% success with clones and zero shock when transplanting.

120 gpm mag drive
600 watts
submersible
Ultra fine 107nm
bubbles

Carbonation Spray
Co2 bug spray
KILLS aphids, mites,
thrips naturally.
Produces 50 gallons
for just \$1.00
